

Sprint 1 Report
SKEDD
Team: Nimbus
Wed Oct 19, 2016

- **Actions to stop doing:**

- The team should stop going off topic during scrum meetings and being inefficient with time. The team should arriving on time to all meetings is essential and we need all team members to be punctual for more efficient time management. The team would like to stop committing on a branch unless the code is fully functionally so others can efficiently merge branches without bugs being sent to master.

- **Actions to start doing:**

- The team should start writing unit test-develop focused code, so that we can continually test our functions so that they are working properly. The team should have better “Done criteria” for tasks/user stories so that we don’t follow the “happy trail” of Scrum and instead use good engineering practices. The team needs to track our task progress with our virtual scrum board as well in relationship to our physical scrum board to keep team members up to date on necessary tasks they need to complete.

- **Actions to keep doing:**

- The team would like to continue to write good and well-thought out code. Also to use proper naming convention between all files for ease of other working on other’s files. Furthermore, continue to state problems on Slack and communicate on developmental ideas and concepts. In a prompt manner, continue to complete all Scrum meetings in a timely fashion. Overall we would like to continue finishing tasks that are assigned to each user. To help keep our code base structured, we would like to continue to use version control to not push bugs to master and always have a working master branch. Finally we should continue to work together after the initial scrum to merge work that passes the task criteria.
- By continuing to do these actions our product will continue to grow and become the fully functioning project we are planning to have finished by release.

- **Work completed/ not completed:**

- As a user, I want a combined login & landing page so I can login, signup, and learn about SKEDD
- As a Manager I want to be able to create an org. So I can start managing schedules
- As a user, I would like email invitations so that I can easily invite people to join my org
- As a user I would like to create an account so I can start using SKEDD
- As a user, I want my organization protected from being accessed by users not in the org, so that our private information stays private
- As a manager I want to be able to add Shifts to my positions so I can assign my employees jobs
- **Not-completed:**

- As a manager I want to be able to view employees profiles so I can edit their shifts and positions (90% done)
- **Work completion rate:**
 - **User Stories**
 - 6/7 user stories have been completed
 - **Ideal Work Hours**
 - We estimated we worked around 92 hours in total over the course of this sprint
 - **Total Days of Sprint**
 - 15 days
 - **Rate of user story completion**
 - .4 user stories per day
 - **Rate of ideal hours per day**
 - 6.1 hours per day
